ಿ Unit 1 | Assignment - KickStart My Chart

Project- Excel / README.md

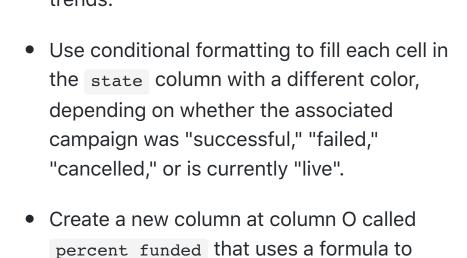

ಿ Background

Over two billion dollars have been raised using the massively successful crowdfunding service, Kickstarter, but not every project has found success. Of the over 300,000 projects launched

on Kickstarter, only a third have made it through the funding process with a positive outcome. Since getting funded on Kickstarter requires meeting or exceeding the project's initial goal, many organizations spend months looking through past projects in an attempt to discover

some trick to finding success. For this week's homework, you will organize and analyze a database of four thousand past projects in order to uncover any hidden trends. ೌ Instructions

trends.

uncover how much money a campaign made

Use conditional formatting to fill each cell

in the percent funded column using a

transitioning to green at 100, and then

three-color scale. The scale should start

towards reaching its initial goal.

Using the Excel table provided, you will be

modifying and analyzing the data of four

thousand past Kickstarter projects as you

attempt to uncover some of the market

Create a new column at column P called average donation that uses a formula to uncover how much each backer for the project paid on average. Create two new columns, one called

category at Q and another called sub-

category at R, which use formulas to split

the Category and Sub-Category Column

into two parts.

at 0 and be a dark shade of red,

moving towards blue at 200.

Create a new sheet with a pivot table that will analyze your initial worksheet to count how many campaigns were "successful," "failed," "cancelled," or are currently "live" per category.

Create a stacked column pivot chart

based on the table you have created.

that can be filtered by country

Create a new sheet with a pivot table that will analyze your initial sheet to count how many campaigns were "successful," "failed," "cancelled," or are currently "live" per sub-category. Create a stacked column pivot chart that can be filtered by country and

parent-category based on the

table you have created.

The dates stored within the deadline and

timestamps. Fortunately for us, there is a

formula out there that can be used to convert

launched at columns are using unix

these timestamps into a normal date.

Create a new sheet with a pivot table

- Percentage Successful, Percentage Failed, and Percentage Canceled In the goal column, create twelve rows with the following headers...
- Greater than or equal to 50000
- Using the COUNTIFS() formula, count how many successful, failed, and canceled projects were created with goals within those ranges listed above.
- Populate the Number Successful, Number Failed, and Number Canceled columns with this data. Add up each of the values in the Number

- Create a new column named Date Created Conversion that will use this formula to convert the data contained within launched at into Excel's Date format Create a new column named Date Ended Conversion that will use this formula to convert the data contained within deadline into Excel's Date format
 - with a column of state, rows of Date Created Conversion, values based on the count of state, and filters based on parent category and Years. Now create a pivot chart line graph that visualizes this new table.

Create a report in Microsoft Word and answer

What are three conclusions we can make

3. What are some other possible tables/graphs

Create a new sheet with 8 columns: Goal,

Number Successful, Number Failed,

Number Canceled, Total Projects,

Less Than 1000

1000 to 4999

5000 to 9999

10000 to 14999

15000 to 19999

40000 to 44999

45000 to 49999

about Kickstarter campaigns given the

2. What are some of the limitations of this

the following questions...

provided data?

that we could create?

dataset?

ೌ Bonus

- 20000 to 24999 25000 to 29999 30000 to 34999 35000 to 39999
- Successful, Number Failed, and Number Canceled columns to populate the Total Projects column. Then, using a mathematic formulae, find the

percentage of projects which were

Create a line chart which graphs the

its chances at success, failure, or

relationship between a goal's amount and

goal range.

successful, failed, or were canceled per
